RE: Gender and Age of CMH Clients 2011

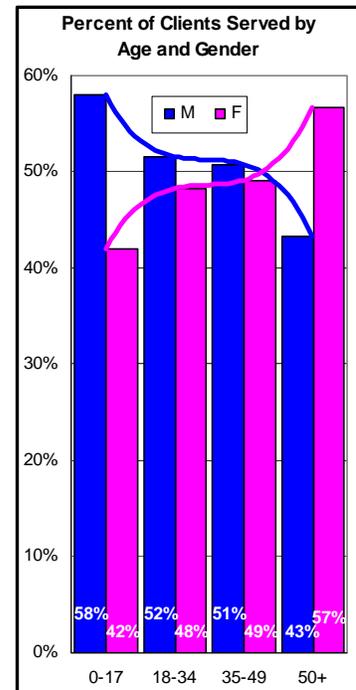

This week's brief report provides information regarding the gender and age of individuals served by Department of Mental Health (DMH) Designated Agencies during FY2011.

The findings reported here are based on analysis of basic demographic data submitted to DMH by designated agencies for all individuals served by Children's Services, Adult Mental Health, Community Rehabilitation and Treatment, Substance Abuse, and Emergency Services programs during FY2011.

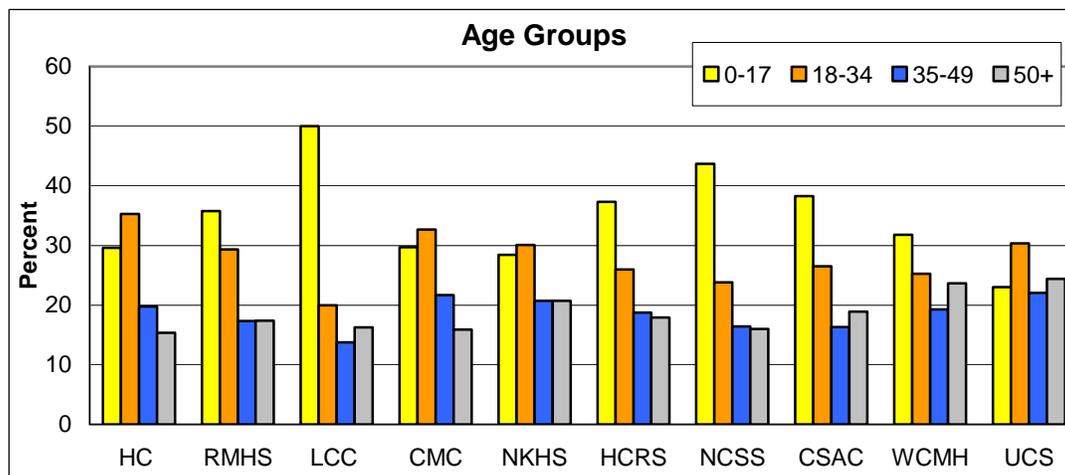

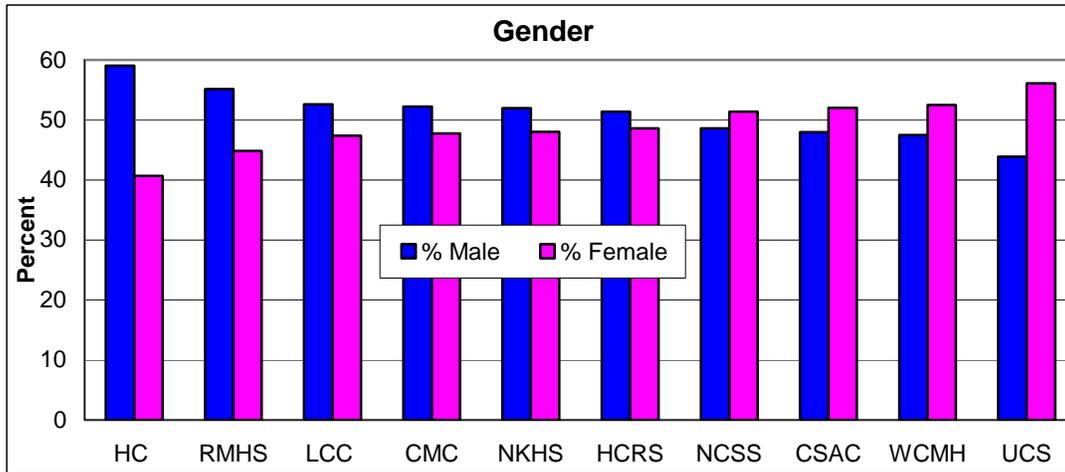

As you will see, females and males were represented about equally (48% female, and 52% male) among individual served, overall. There was, however, substantial variation within age groups. In the 0-17 age group 58% of individuals served were male and 42% were female while in the 50+ age group 43% of individuals served were male and 57% were female.

There were also some differences among designated agencies in the demographic profile of individuals served, with the representation of men in the caseload varying from a low of 44% at United Counseling (UCS) in Bennington, to a high of 59% at The HowardCenter (HC) in Burlington, and the representation of older adults varying from greater than 23% at UCS and Washington County (WCMH) to less than 16% at HC.

We look forward to your comments, questions, and requests for further analysis. You can reach us at pip@state.vt.us or call 802-828-1703.
